Declaration of compliance EMRT – Extended Mineral Reporting Template

The Extended Minerals Reporting Template (EMRT) is a standard reporting tool developed by the Responsible Minerals Initiative (RMI). It is designed to support due diligence requirements for identifying and disclosing information about the supply chains of six minerals: cobalt, mica, lithium, nickel, copper, and natural graphite.

The template was introduced on October 20, 2021, and will be expanded in 2025 to include additional minerals in the reporting.

The use of the EMRT is currently voluntary and serves to promote transparency within the supply chain.

Via the following link you can download our currently valid EMRT version 2.1.
